

Processes, Systems and Manuals

Provelio have produced a wide range of documentation to provide a structured and consistent way in which to plan, implement and control programmes, projects and general estates management activities. These documents provide a rigorous, transparent and auditable approach to managing projects to meet Client’s business objectives.

Client Sector	Various
Service Provided	Organisation Management Systems and Processes

Our Role

Provelio can produce bespoke management tools to ensure the client business objectives are achieved. A gap analysis is undertaken of the client’s current approach and identification of where the client wants to be. Detailed process mapping is carried out to enhance or modify the existing approach. This may require innovative new models or use industry knowledge bases such as PRINCE2, MSP or the like.

Client Benefits

This will provide the client with a well-structured, measurable approach to delivery. The key benefits that the Provelio approach can bring are:

- A method that is repeatable
- A method that is teachable
- Ensuring that everyone knows what to expect, where, how and when
- Early warning of problems
- Being proactive, not reactive, but also able to accommodate sudden, unexpected events.
