

Procurement and Integration of Specialised Equipment

Provelio have been required to identify, procure and integrate specialist equipment within the criteria of a number of diverse projects, working with clients in a variety of sectors.

Client	Various
Project Title	Procurement and Integration of Specialist Equipment
Client Sector	Various
Service Provided	Infrastructure, Engineering and Specialist Equipment Management

Our Role

Provelio have undertaken reviews of specific items of equipment at the initial stages of a project, this has led to the identification of items proposed by the client that were found to be unsuitable through size, cost or performance. Subsequently a brief would be undertaken for the performance specifics and from this Provelio are able to identify and source alternative equipment for the client. For example a client had specified a £30,000 medical air shower but through a review of the brief Provelio were able to source an alternative equal specification unit from a different supplier at a much lower cost. Provelio have also managed the coordination of all associated services to the equipment, including the management of installation and interfaces to build elements such as fire alarms and access control. When the equipment has been relocated to a new facility Provelio have managed all aspects involved with the move, including the necessary upgrades to ensure compliance with health and safety regulations and achieving final certification.

Client Benefits

Provelio provide the client with the ability to source alternative specialist equipment from a performance specification, allowing them an alternative to their existing supplier which can result in significant cost savings. The total approach of Provelio includes the coordination of the delivery, installation and commissioning of equipment, all within the project programme, this allows the facility to be handed over fully functional rather than requiring a separate installation stage.
